

Extra resources and analysis

1. <https://opendata.transport.vic.gov.au/dataset/victorian-integrated-survey-of-travel-and-activity-vista>
 - Once the year is over there should be a “Persons 2025 - 2026” and “Trips 2025-2026” or “Stops 2025-2026” CSV file, which we can then compare it to the 2024-2025 versions. Create graphs on either Python or Excel for 2024-2025 and 2025-2026 to visualise the difference.
 - You can consider the below questions when reading the graphs:
 - Has the percentage of young people choosing public transport increased relative to private car trips or walking?
 - Are young people taking more total trips per day now that travel is free?
 - Is the increase mostly for essential travel or leisure?
 - KEY:
 - STOPS: Best used for analysing intermodal transfers (e.g., are young people catching a bus to get to the free tram zone?) and exact boarding/alighting locations.
 - TRIPS: Best used for understanding why young people are traveling and their overall choice of transport.
2. <https://discover.data.vic.gov.au/dataset/annual-metropolitan-train-station-patronage-station-entries>
 - Able to isolate City of Boroondara train stations and add them together but not able to do so for 2025-2026 data yet
 - CSV File to consider: “Annual metropolitan train station patronage (station entries)”
